

One Advanced Solution 3 Simple Ways to Sell

No client should be left behind. That's why the SECNAP SpammerTrap® delivers the most advanced protection from spam, viruses and mail-borne malware in three simple ways to meet the widest range of client needs. From the SpammerTrap appliance, to hosted SpammerTrap service, to a virtual private SpammerTrap you can manage for your clients—we guarantee the flexibility, scalability and convenience they need. Exclusively from SECNAP. Exclusively through our Channel One Partners.

1 **Hardware Appliance**

Seven robust appliance models are available to meet the dynamic needs of organizations from SMBs to global enterprises.

- **SME Appliances** – Enterprise-class features scaled to small and mid-sized businesses.
- **ENT Appliances** – Full-functioned and powered for enterprises.
- **GEM Appliances** – Enhanced hardware platform for global enterprises.

Clustered configurations can support an unlimited number of email users.

2 **Virtual Appliance**

This Software as a Service option provides the performance, accuracy and features of our function-rich appliance—with the convenience of a **hosted service**. Operating from our redundant data centers, there is no hardware for your clients to purchase or maintain.

Who'd have thought that such a convenient solution could support as many as 25,000 email users? (Or that virtual clustered options could support an unlimited user community?)

3 **Managed Service**

SECNAP Channel One partners can even offer clients the industry's most advanced email security solution as a **managed service**, through a dedicated Virtual Appliance on the SECNAP network. Partners pay a low monthly fee while expanding their user communities, then only for the number of users under management.

All three options leverage the same next-generation technology that has made SpammerTrap the favorite secret weapon of clients (and their solution providers) everywhere!
